My 1.01 Crashed by showing the screen for like 3 secOnds then disapearing along with the icon [the screen was just a white box]. MY 1.02 crashed by loading it, saying on the white screen and continuously loading..... I can stil run renegade but rengaurd crashes at any random time.

I put my compatability to whatever u guys told me, and it fixed the crashing but put all the text in a messed up box in the grey dialog rectangle...
