snipesimoFor a firewall use Zonealarm Free edition, and for anti-virus use AVG Free edition.

:rolleyes: I have a free version of McAfee Pro 7.1 on my laptop, however, my server comp, got a virus & I had to reformat, therefore, I lost the installer before I could make a backup copy. I just installed Zone Alarm on there since, I've noticed alot lately, that several hackers have been trying to hack me, my McAfee firewall blocked them, they tried about 20 times in an hour while I was in Renegade.

Also, if anyone could tell me where to get another free copy that's fully functional of McAfee Pro 7.1 firewall/anti-virus I'd be very grateful
