HomeyExcellent idea!

Now the only concern i have is abuse of language and racism and such.

If you have a mod they should be able to ban them from Teamspeak for 24-48 hours or something. But maybe we will actually see some teamwork in big games now. I host my clans teamspeak most of the time and its an excellent program.

Per my request, the teamspeak developers are adding ability to kick and ban people from the server via a telnet connection, so it will be easy to add ability into BR for mods to kick/ban abusive people from the teamspeak channel...something like '!tskick joeblow cursing at people'.
