Page reply script for server moderators, allows you to just type /r message instead of !page wolname message. Works for both BRenBot and BlazeRegulator .Net.

http://eoehost.servegame.com/eoe_ftp/users/snipesimo/snipesimoprivate/pagereply.mrc

To install download the file to your mIRC directory then open mIRC and type /load -rs pagereply.mrc then whenever someone pages a server and you wish to respond to that person, all you have to type is /r message.

Note: I do realize that npsmith made something like this a long time ago, but mine is updated and isn't so involved to get working.
