So much functions that arent needed, well i think so. This should work better

```
alias /r {
  msg %recentpagechan !page %recentpage $1-
}
on *:TEXT:[PAGE]*:#: {
   set %recentpage $2
   set %recentpagechan $chan
   halt
  }
  elseif (Page From isin $1- {
   set %recentpage $3
   set %recentpagechan $chan
  }
}
```

Those functions, $strip and $remove arent need that much. With mirc u can use $1. That will select the first word. It should work. Ill test it when i get back later.
