It does look like the Avenger, doesn't it?

Also the manual says the following:

"WEAPONS: 30mm chaingun/70mm rockets"

30mm Chaingun does not mean the avenger cannon, the Avenger is almost Half the size of the Orca. The chaingun pictured only has 6 barrels where as the Avenger has 7.

The Chaingun on the Orca would more likely be a spin off of the 25mm chaingun used on the Cobra as it is a lot smaller and lighter.
