As the unofficial beta tester for various recent LFDS builds from codewench, i may announce that there is a new (final) LFDS build coming very soon.

it fixes the most serious bugs and brings the LFDS closer to the Win32 Counterpart.

Some of the fixes:

- All Custom Maps now working!
- Extra Units working
- Host-Messages ingame (changed team, suicide) working.
- Command Line fixed

Remote Administration Capability is provided by my renrem replacement available at <http://mac.tactical-command.de/renrem/>

Again - we have to thank codewench for spending alot of extra time and dedication into making this final release - We owe you!
