Loading has to do with the RAM if you have low RAM or a bad type its gonna load slow. I got mine to load alot faster when i opened MSconfig and stoped programs from starting when windows started....to do this go to start>run and type in msconfig and press ok... msconfig should come up click the "Start up" tab and uncheck any programs that you dont want to start up...after that click services and click "hide microsoft sevices" then click disable all. after that restart your comp and see if renegade will load faster.
