Yeah. If the problem of sniper rifles on aircraft was fixed, fewer bullets would be needed because people wouldn't be spraying constantly. Another thing about aircraft that might be worth fixing is the rockets - they go like 50 mph and have a turn radius like a skateboard. I think it would be worthwhile to make the rockets travel a lot faster, in a mostly straight line, and reduce the amount of ammo on the aircraft, because fewer bullets would be needed if rockets were used almost exclusively on vehicles.
