Being realistic to the Apache, which is armed with a 30mm automatic Boeing M230 Chain Gun. Rate of fire of 625 rounds per minute. The helicopter has capacity for up to 1,200 rounds of ammunition.

<http://www.army-technology.com/projects/apache/>

A hint of realism to the weapon might not be that bad, since you will be having to make those refill trips fairly often. This way, you have to hold the shoot button down for a little under two minutes to completely empty of machinegun ammo. 150 rounds is laughable at best, though the damage done to medium/heavy armour might have to be augmented for 1,200 rounds.
