after mac finally compiled the linux version, scripts.dll 1.7 is now out.
get it from <http://www.sourceforge.net/projects/rentools/>

Report bugs to me (ICQ/AIM/MSN/Yahoo preferred but otherwise use my jonwil@tpgi.com.au email address or better yet post here on the forums)

A fair deal of new stuff (including some Naval Yard stuff done by the RenAlert team for RenAlert which may or may not be usefull for someone else).

In fact, there are almost 300 new scripts in 1.7 (new on top of the westwood ones that is)
