ok heres the problem: today rengard seems to act amazingly : freeze at startup or being kicked after a long period of tim with "you need renguard". i have read that 1.03 solve bugs so 2 questions:
-where to get it?
-why is there this bug cause i dont think that this is very good for renguard after the "crashing 1.01" (after a very good 1.0) the 1.02 "i freeze or i kick you (and nearly everyone on the server) after 40 min of play", personaly i think that the freeze is ok (its beta and bug are normal in a beta) but the auto-kick after 40 min is very frustrating and i hope that a solution will be finded soon or that an auto-patch will be proposed via the 1.02 interface cause i have never seen rengard server so empty (mainly if you consider that 10 second before they were nearly full)
