Ok I'm on my silly 800mhz computer right now.

Well I tryed all that; no luck...   Ok two things I can think of:

1. I have comcast, and they scanned me a few days back, and told me it costs 5$ extra to have two computers hooked up to the cable! Maby they some way of blocking my access point??? If they do I'm going to sue them.

2. More likely... I did a spybot seach and destroy scan on may 9th. After the scan it said something like "Would you like spybot to change your network settings?" I said yes like a moron... Maby that's it???

Ok one thing that really pisses me off is I tryed to reinstail the drivers for my Linksys Wireless-B USB Network Adapter Model No. WUSB11. There is no unistail, and I can't find the drivers ANYWHERE! I'm sure they are still there though, because it's in my tray, and I can open it up to find... "newton". I even tried popping the disk in to see if there is a reinstail there. The auto run didn't start, so I opened the disk. Founded two instail exe files, and all that happens is it flashes a window; then disappears...

I'm so confused / angry... All I want is my internet back...
