Hey all,

You may know of the great new dragonserv. This isnt public and i know that a lot of people would like this on their servers. All i need is a programmer that would be able to create some thing like brenbot, but will be different. It need to also have commands and report to irc. If you know how to do this and want to make a great new server aplication like dragonserv, Then please PM me. I will read the PM's and decide who i will get to make this app. I can make the random crate script so if you have any desgins for that then send me them to!
