Yes, i know. I will be combining them together. So there will be commands, irc reporter as well as the random crate affects. The crates will be the hardest i think due to i will have to find some way to tell them when they get to the crate, Host pages the player saying wot they got. Its not going to be easy. i wass desgining the crate yesturday but i need some one that knows
C++
perl
or another languge that runs as an exe file extension. Till then i cant do any thing. All i need is the soruce code for brenbot, lol. Then modify it.

The hardest bit for it is probary reporting to irc from renrem.exe or fdstalk.dll which isnt a public thing. So there.
