jonwil Given what can be done with the engine as it stands now, what I think should be done:

1. make the transport helicopter have better armour (or better yet, make the snipers do less damage)

and 2. give it a machine gun (maybe the hummvee gun).

Remember, only one person inside a vehicle can fire.

If there is one person inside, they are both driver and gunner.

If there are multiples, the second person to get in is the gunner and the others are passengers.

Agreed. These pigs need some protection, and this sounds like the perfect solution.
