There is a gamespy mode server running called renbattle. <http://www.renbattle.com> they run mod maps all day on it and there can be some good games on the maps. It's a 32 player server on a 250MB dark fibre connection and it normally runs well. I know you probably won't play there as it is a Gamespy server but the mod maps are good. Consider it if you want to try some new maps.
