gibberishHave you thought about hosting teamspeak servers ?

What would your price list be for those ?

xptek\$1.10 per player.

Hope you are paying for a TS license then. TS has been cracking down on people charging for the service. TS is free as long as you are providing the service for free. Once you start charging, they want to get paid.

TeamSpeak.orgTeamSpeak is an application which allows its users to talk to each other over the internet and basically was designed to run in the background of online games. The voice quality and hereby the bandwidth usage is configurable and can be low for modem users or as good as normal phone calls for better connections. Still the client's maximum bandwidth won't exceed 25.9 KBit/s (=3.3 KB/s) upstream.

Also TeamSpeak uses as little latency as possible, which makes TeamSpeak one of the best online gaming communication programs.

TeamSpeak has a lot more features than these basics, but even unexperienced users don't have to be scared. As TeamSpeak is divided into a server and a client application, advanced users can set up a TeamSpeak server, which is so to say the meeting point for the clients. This means that beginners can just fire up the client, connect to a server and talk to their friends. After the first small steps they will discover a whole variety of features that give TeamSpeak a high rating when it comes to voice chat tools as well.

But one of TeamSpeak's largest advantages is: TeamSpeak is a cross-platform voice communication tool. This means that client and server are available for Windows as well as for Linux. It doesn't matter which operating system you use any longer, you can talk "across the border". And yes, special greetings to the large MAC community, a MAC version of TeamSpeak is planned already.

Additionally we have to say that TeamSpeak is a contribution to the gaming community and thus it is completely free for non-commercial users. Commercial users, defined as anyone who uses TeamSpeak as company or to earn money (see the license agreement for the exact definition), need to pay a small fee to TeamSpeak. Read the license agreement for details.
