GizbotvasWho is this xptek?

Why does he support the spamming of fake servers?
Why would he object to our dissaproval when they were clearly placed on WOL to annoy and discourage legitimate server selection?

I don't get it.

You do realize, that most people here are smarter than a cardboard box, and a stunt like that would of probly gotten his serial # banned from wol, and got himself banned here too, if ren was still being supported of course..
