I am yet to attempt to script this, but I will paste the PERL code Blazer uses to retrieve the info. If he doesn't want it posted, he can remove it.

[20:22] [Blazer]: wol rank is a bit more difficult

[20:22] [Blazer]: you have to POST info to their server, and parse the output

[20:22] [Blazer]: not just a get

[20:23] [Blazer]: my \$req = HTTP::Request->new(POST =>

'http://renchat2.westwood.com/cgi-bin/reneg

[20:23] [Blazer]: ade/individual/carpenter');

[20:23] [Blazer]: @data = split(/\n\n\n\n\n\n/, \$content);

[20:23] [Blazer]: \$lines = (@data);

[20:23] [Blazer]: #print "Data contains \$lines lines.\n";

[20:23] [Blazer]: for \$line (@data) {

[20:23] [Blazer]: if ( \$line =~ m/(\d+)\s\n(.+)\s\n(\w+)\n(\d+)winsV(\d+)losses\n([\d\,]+)/ )

[20:23] [Blazer]: {

[20:23] [Blazer]: \$name=lc(\$3);

[20:23] [Blazer]: if (\$name eq \$user) {

[20:23] [Blazer]: # print "Found \$3!\n";

[20:23] [Blazer]: \$kernel->post(\$pci, 'privmsg', ReplyTo(\$env), "WOL Rank: \$1 WOL Titl

[20:23] [Blazer]: e: \$2 WOL Name: \$3\n");

[20:23] [Blazer]: \$kernel->post(\$pci, 'privmsg', ReplyTo(\$env), "Wins: \$4 Losses: \$

[20:23] [Blazer]: 5 Ladder Points: \$6\n");

[20:23] [Blazer]: return;
