always 2 there are... a master and an apprentice.

So... I remember making that Nod Turret for Renegade many years ago... we had ladder rungs on it and a hatch on top that opened... then we figured those were a waste cause we didn't need em for gameplay... cool looking though. Maybe I can dig up an image of that bloody thing somewhere. I can't remember... there is a turret in the game right? One that is like the one built here?
