Subject: Server Side Client Specifications are now available.
Posted by Crimson on Tue, 25 May 2004 20:33:08 GMT

I am in the process of building a script in which you send a request to renguard.com and get a response back to use in script building -- like:

http://www.renguard.com/blahblahnonexistent.php?user=simo

And it will return something like:

snipesimo [RG] n00bstories Server 1
Blahsimo Idle

This should help you in your script writing. I have already written a couple scripts like this for Speedy to make mIRC bots with.
