if given the models and textures to go along with them and a script to animate by, i could also do this for u. i would animate in max and just render out the movie with max itself and then if u would like i could send it through After Effects and spice/clean it up.

u got my email just hit me up if u want to elaborate more on it. or on AIM with the screen name WTFnameNOW.

btw: for some reason, i like animating just as much as i like to model.
