It is not working,
when hardartisthitter and hardartistdwarfe along with c0brala were crashing servers yesterday,
they took all the servers down on wol & gsa including the n00bstories, black-cell, fastcon,
renwarz, unrules, twa, the pitss. He is also circulating a list of WOL server IPS.

they has been giving the program out to a lot of people. I am renting a server from alkaline, and
he told me to try the patch, but the patch locks up the FDS, and when its not locked up, the fds
can still be attacked by this exploit.

Does anyone know anything to stop it? Some people said something about a router or firewall...
