Gohlathe server runs ok on it, and brenbot puts in the first 3 lines of text in irc fast, and it goes slow then...

If you put it that way, yeah the bot is sometimes very slow connecting to the irc server, like n00bstories (read SOMETIMES). A few times it wont even connect to it. You have to shut the bot down and connect again and usally that works direct, takes like 5 secs.

But when the bot joins the channel its very fast on the commands.

Your computer specs are abit to low, how much memory do you have used up? do you run any other servers/services on the same computer?

This is what my server is built of:

Operating system: SuSE 9.1 with Kernel 2.6.4

CPU: Intel® Pentium IV® 3.0GHz 800Mhz FSB 1024KB cache

RAM: 3x512MB of DDR400 RAM CL 2.5

Harddisk: 36GB Fujitsu U320 SCSI 15000 RPM 8MB

Graphics: ATI RAGE XL SVGA PCI video controller 8MB (On-Board)

Network Adapter: Intel® PRO/100+ Server Network Connection (On-Board)

Motherboard: Intel® Entry Server Board SE7210TP1-E

Internet connection: 10Mbit Full-duplex ethernet LAN connection
