I have TNT2, but the exact name of my card is "Nvidia Aladdin TNT2". I know, it is a sh!tty card, and it came with the computer, but oh well... I have set the card to highest performance, but it did not seem to have any effect.

But overclocking destroys/damages the card or no?

P.S: I have pentium III 733, 128MB RAM. I use 800*600*16 resolution.
