Hmm...processor perhaps?

I play Renegade on my laptop (2.4GHz processor, 40GB HDD, 256MB RAM, & an ATI Radeon 340M graphics card) & I get roughly 40-50FPS, though I've only averaged it in the last few days. I'd say MSN Messenger could be a part of your problems, cuz it's a memory hog alot of the time. It says it's using a little, but it's using alot more, I know from experience.

Other than that, no real clue, if I were able to get on it or something I'd be more help. But I can't, so ya Hope I helped some
