That daddy-long-legs being deadly thing has yet to ever be proven. Yes they can't bite humans as they are too small, but after a quick google search every page I came to said the same thing: Since no-one has been bitten, and there has been no studies on it, there is no proof that they are in fact deadly.

However, thos fire ant look like they suck. I suddenly appreciate the cold, wet, crappy climate of the UK.
