Here's a working link to the picture http://www.n00bstories.com/image.view.php?id=1968065764 .

He is using the Death Adder Color Aimbot, and no he did not create it. It is also not an aimbot, but just a clickbot. It scans for a certain color inside the circle you define, and when it sees it, it sends a mouseclick. It does not AIM for you, thus not an aimbot.

Snipefag is free to use this all he wants, and it's not really an advantage unless he is in a sniper-only server. Games of renegade are not won by snipers or bodycount, rather by destroying the enemy base. You can snipe 100 people and easily still lose.

It's a shame people like this aren't team players, and would rather spend the entire level standing in one spot waiting for some 3 point free infantry to come into their crosshairs.
