Hello!

I got two computers at home connected to Internet via DSL and the LAN - "internet connection sharing" feature of WINXP.

Both computers run Renguard. On both Computers Renegade can be started correctly using the Renguard startup screen where it says "Secure link established - Welcome to renguard, " (user 1 at computer 1, user 2 at computer 2).

User 1 has no problems joining a RG - Server. User 2 also joins the server but gets kicked after 5-6 sec. We tested it on a server where there was noone else online (moonlightshakers). Apart from that, we can usually play together in one (non - RG) server without any problems.

Do you know a reason / a solution for that?

Thanks in advance
