xptekQuote:as for xptek, that fool messages me on msn asking how to crash servers, what a loser.

What the FUCK?

I never asked you how to crash a server. I know how to do that. I was asking how to protect from attacks.

Quote:and I wasn't pointing the post you towards you shit for brains, where the hell did you get the idea I was telling you to run renguard

I've only been up since 4AM working on SS related stuff. :rolleyes:

bullshit, you pm me asking me saying Black-Cell is hacking your servers, you didn't even know what they were using. YOU asked me what they were using, I said I don't know nor do I know anything about your servers. Then you asked me where to get the tools to crash servers, I told you HELL NO and you left.

Obviously your lying history will be revealed again, you'll deny this and I'm not surprised :rolleyes:

as for being nice or what not LOL... at that point anyone not flamming you would no doubt be considered nice

I know your going to eventually PM me or post on our forums asking for a "peace" THEY WILL BE NO PEACE, UNLESS:

-1 you admit, you edit MIRC logs and took a screenshot where you covered your tracks after you said cdkey check was bases solely on always.dat and the no-cd check exe was the same as the one w/cd-key check

-2 you bashed reborn yet you joined my server TO PLAY THE GAME! NOT TO TEST IT FOR BUGS :rolleyes:

-3 You can't design shit, you didn't do anything on liquid2d.com, you have no skillz
