I had the same problem a while back.

[HLOWTomten]You need to add ssc_ignore.txt yourself, pico ssc_ignore.txt (add playername)

When you start ./renegade_server it will give you a port number, listen os port nr blabla or something.

Add that port number in your setup.ini file

RemoteAdminPort = 4853 for exampel

RemoteAdminIP = 10.3.31.18 (Whatever)

Then goto the brenbot.cfg file:

BotMode = LFDS

#--Remote Admin Settings-----

The next 3 lines should be the same info that is in your server.ini

Note: Although it says "Linux" its the same for Win32

RenRemLinuxHost = 127.0.0.1 (as before, whatever)

RenRemLinuxPort = 4853 (exampel)

RenRemLinuxPassword = XXXXXXXX

This should solve your problem.
