Hi all,

I've been trying to search high and low for a Counterstrike bot, that'll report everything to IRC. I cannot find one that runs on Linux, so i ask this;

Can anyone here whip me up a bot for Linux to read from the log files, and report it to the specified IRC Channel, Server etc.

I know this won't be easy, i would try it myself if i had ANY knowledge in Linux at all.

If someone could do this.. i would like for it to read "certain" things from the logs. So, instead of reading it straight out, replace things like this:

Quote:L 06/29/2004 - 14:46:21: "Toaster-Boy<504><STEAM_0:0:714114><TERRORIST>"
disconnected

To something like this:

Quote:Toaster-Boy (STEAM_0:0_714114) left the game

Also coloured messages, so it's easy to determine between Terrorist (Red) and Counter-Terrorist (Blue).

Anyone up for the challenge? Or...
