Quote:-BRenBot Renguard doesn't work, it's just not on (while i put it on, settings are correct)

once you have turned on renguard via the !set renguard on command, you need to restart BrenBot

Quote:-SSC can't read ssc_ignore.txt since it is there and every setting is correct.

you need to create the text file and add it to your BrenBot/SSC directory

Quote:-I cant play cuzz I connect through network, not Internet.

add your name to SCC_Ignore.txt, the format is:

<name1>
<name2>
<name3>

etc

Quote:-Renevo SSC doesn't work properly, causes lag in the server uses ALOT of memory somehow, hangs every 20 minutes and doesnt kick people out of the server without renguard.. Sometimes it does only after 10 minutes.

RenEvo SSC suxs anyway

Quote:-MOTD doesnt work with any of the SSC's and server doesnt appear in renguard server list

have you requested a MOTD from http://www.renguard.com?
