I installed Renegade FDS on my server and BRenBot 1.35, ok, took me a while to get it opped in the channel because I deleted something in the config... Thats all sorted.

Now I have bigger problems, yesterday people joined in GameSpy (don't give any sarcastic remarks) and only one guy (without clan tags) was showing up on the IRC channel and in BRenBot. While the rest of the players were displaying in the Renegade FDS window.

Also, I can't say anything to them unless I type msg <MESSAGE> in the Renegade FDS window, any help greatly appreciated.
