Subject: Renguard not stoping final alert....
Posted by Renx on Sat, 03 Jul 2004 15:55:52 GMT

That server used to be my favourite. Then after cheats came out, there were never, ever, any mods around. Tons of games were ruuned by cheating. When I saw the RG tag on the server a while ago i decided to give it another try. When i connected, rg wasn't running and there was 2 cheaters with final ren in the game. A week or so later i tried again, no rg and 1 cheater in the game. Maybe I just have bad timing, who knows.

I don't run my own server. But i'm an admin on the n00bsvrs, they run RG without a problem. I'm a mod on the former TwA server, it runs WD's RG SCC without a problem. And I also mod a few other server, some run renguard and some don't. It wouldn't hurt to keep a few more moderators around for the Toaster Oven server.

If you're having trouble with RenGuard(seems to be the problem...) then go to the support channel and try and get help instead of letting cheaters run through your server.
