BlazerMrSpeedRenxBlazer[BA]toaster is not a RG server, despite whatever the MOTD might say.

I was going to mention that. RenGuard rarely runs on their server, it only has that tag in the menu. Besides, that server has been a haven for cheaters ever since the first cheats were released. Before that it was a great server, but now it's just garbage.

Guys Renguard runs on that server since the day it was out. It is NEVER EVER SHUT off. Thats why no one plays on it but a few good players with RG. Its running right now. it was running last night, it was running last week and it was even running all last month. So if you can please tell me how you know its not running and why its not if it isnt becasue we support Renguard. Its kind of nice sometimes when its fked up cause the server fills up becasue this community just dosnt like your product for many reasons. Mostly stupid reasons!

Yo RENX you can go f*** y***self for your rude comment saying our server is garbage. I just lost all respect for this idiot. Hey Renx tell me what server is yours becase for someone to call somone elses server garbage they must have a full time 24/7 server running right? You need to know your role and shut your hole.

Before I posted that, I accessed the RenGuard network to see if there was any [BA]toaster server on RG, and there was none, I just searched again, and the closest thing I can find is a server called " ~ToAsTeR OvEn~ w/RenGrd". So all I am saying is that while [BA]Toaster may advertise that it is on RG, it is not and thus people can cheat. If they have some RG SSC runnning perhaps it is misconfigured or something, please alert the admins to come by the support channel so we can get them fixed up.

Sorry to do this to you Blazer, but..

MrSpeedOur server [WOLSpy] ~ToAsTeR OvEn~ w/RenGrd (209.120.239.79:7000) (which was named [BA] ~=Toasted=~ a few weeks ago)

so they are connected to RenGuard, or at least are now.

This sounds like it would have been a box issue (as Crimson pointed out) or, seeing as how no security system in the world is immune, someone may have found a way around it.
