Note the difference between a server side "cheat" and a client side cheat. If I put a server side cheat on my server , others will eventually notice it, and your server will not be as popular agin.

Client side cheats, the ones that RenGuard blocks are far more dangerous..

gibberishmacNoone releases a different version of the dll, because it is not available. Only BHS members have access to it.

Sorry Mac I think you need to face the fact that this Pandora's box is already way open.
