I may have asked this question before.

Anyways. I have reinstalled the game, reformatted and updated with all the exceptional drivers I can find.

Problem1: Game crash sometimes. I don't know if there is the same time or w\le. I do not lag out or anything like that, the game just crash. The computer is not too hot, not cpu, not vpu, nothing. It crash at every server. Sometimes I can play for long without, sometimes it crash shortly, and frequently. I go like normal, then the game freeze for a sec, and I return to desktop viewing the RenGuard screen.

Problem2: Sounds. In first view I can hear them OK, but in 3rd view there are some I can't hear, like Tib Flechette gun and both sniper rifles. I know you are further away, but it was never this low before. I can barely hear tanks fire too, but I can hear the door on a building open very loud.
