Mee too, but i tried to download 1.01 from the homepage.I did and installed it on that way but everytime i klick on renegade, i get a systemerror.It can't start and shut down after a while.I re-startmy pc, re-installed Rg 1.00 and after 1.01. Nothing helped, so im not able to play Renegade with renguard.

Unless the ultimate coincidencething happened, I'm betting that this has to do a lot with WOL being down.

Um... did u guys from the Renguard-team yet notice that Renguard is actually not working anymore, or better: It IS working but it takes it arround 30min to connect... That means to me, that I'm not able to join ANY game throught Gamespy!!

Im staring at it for over 1hour now cos im rather desperate to play Rene :S It managed to connect 3times now (but it only connected to the Server, it didnt show your username, so I think it wouldn't have worked on a Renguard-protected server).

Unfortunately the server was always full when it finally managed to half-connect :S

Hmmm. Fixed. Sorry about that. I can reproduce it and will tell it jonwil this evening, when he's

online. Not sure yet what it is.

Also, we'll be addressing these crashing issues then..
