I beleive this would go in the Mod Forum :S
I am trying to install and use Blazeregulator.
I extracted Rencore and FDStalk.dll's, and the VB's. Know when I try to open up BR I get the error MSWINSCK.OCX or one of its dependencies not correctly registered: a file is missing or invalid.
I do not know what to do, if anyone can help me, Im on all three messengers.

MSWINSCK.OCX is one of the visual basic runtime files, so I'm assuming you have to download them before you use BR

Veyr stupid, it is a program that uses the FDS- but makes so adds many more options and control. If you see a server name with [BR] in front of it, they are running it.

God, same error, even BR.net upgrade didn't work. Apache got off (pffft)
Blazer plz IM me if you are on.

MSWINSCK.OCX by the looks of it used by the windows network. It's a visual basic common control file which should be included with the program but you may be able to download them if it is a visual basic runtime file.

I got that bug and i installed the .bat but it said bad namefile

so how can i get [BR] to work

I havent been able to get BR working but at the moment i can only host 4 player games so i am waiting till i get my 1 MB connection

Then i will make it my duty to start a 8 player Snipe server on europe for all you european snipers and will also get BR working but i will post here once its up and running.

I got the same error once so I just moved the MSWINSCK.OCX file to the system 32 folder wen't to run, typed in "regsvr32 C:\Windows\System32\MSWINSCK.OCX" (without the quotes) and hit ok...

Worked fine there after.
