The page pretty much says all you need to know...
http://www.thecodesmith.com/?page=RenWOLstatus

Something i just put together, due to all the people commenting about WOL.

Future updates may include:
[list=a]- Invoke a URL depending if WOL is online/offline.
- Send e-mail notification to a given address if WOL is online/offline.[/list:o]

You can use this right now, 6 months away or when WOL next goes offline (whichever comes first
).

I find that to be very useful...though I do somethin a lil more difficult at the moment, I open
RenBuddy list, with auto connect on, if it says "Connecting to Weswood online with extended
details" then it's down, otherwise it's up & it'll connect 100%

LOL, So simple yet so useful. Your appies are always right on.

Great work. I still use my Ren Buddy list all the time.

Thanks for the comments guys, you keep me motivated.

IRON-FARTNice. What did you make it in?
Nice site too.

It's programmed in Visual Basic 6.0.

Just made a few changes, and updated to version 1.2.

[list=a]* Now includes the sound files (I forgot to put them in the ZIP).
* The system tray icon will change appearance, reflecting Online / Offline status[/list:o]

---

npsmith. You should make it so you can have it launch an executable on it coming offline to online, such as the RenegadeFDS. (That way when WOL comes online and servers have been offline, it'll automatically start the server.)

Do you think you could make a script do integrate for websites?
That would be more cool if you could quickly view whether it is on/offline on your website.

Do you think you could script it to open on windows startup, I suppose it's me being lazy but I just can't be arsed editing the registry setting. Other than that thanks for the great program.

TnTANDYDo you think you could make a script do integrate for websites?
That would be more cool if you could quickly view whether it is on/offline on your website.

I already wrote a script to do that (thanks Dante for the base code).

Its just the basic, because i use it for personal use, but if you like i can give you or anyone the code.

huh? do I know you   mind your business fool! Its bo selecta, like my favourite programme on

---

Channel 4 in the UK.

But I have changed it, before reading this post, call it a co-insidence if you will.

=============
Moving on to topic.

Madtone, that would be excellent if you could give us the coding for that nice feature.

I will just ask with Dante if thats ok first, as it wouldn't of been possible without his code.

Will get back to you.

multiple servers possible?
The easiest way would be to make a batch file (.bat) with the text below, Enter the BAT file as the program that is run once a connection to WOL is found.
Quote:@echo off

C:
cd\
cd games
cd renegade
server.exe

Repeat as necessary to launch multiple servers.

Couldn't exactly remember the paths to the dedicated server, so i made it up.
