Ok im i little new at hosting games with FDS but can anyone tell me why WOLSpy won't list my server on GameSpy? And also (iknow this will probably sound really stupid) how do you play in a game that you are hosting? Whenever I try to open the game, the title logo loads but then nothing happens after that.

You won't see your server on Gamespy if you're on the same network as it.

Also, you can play on the same server you're hosting if you start Renegade first. It's not recomended because it will lag.
