Hi all I am still having the crash error in 1.02

I have determined the following

-All who are experiencing the error are xp/2000 or some system built on nt users

-(FOR 1.02) clicking on disable advance text services AND/OR run in 256 color mode will result in no crash (256 color mode makes screen wierd no advanced visual gice u the game option to play but no html page)

-From who I asked (7 people) 6 were using an ATI video card

-Everyone is using dx 9.A or DX 9.B

-Crash file is NTDLL.DLL (Location varies by version number and os)

Notes:

Try to turn off the advanced text first then if not try colors and finally both, it worked for me (you will see no page just the you've connected mmessage then hit renegade and play as normal)

Someone plz sticky this or confirm it

@Mac or other admins hanging in rg\_support on irc @ n00bstories if any1 needs me

Ok, RenGuard keeps crashing on me now, I got to copy the text it had in the box just before it crashed >>>

Warning. No WOL Name found. Connecting to WOL will probably fail

Trying to connect to server #1...Connected

Connected to server.

Welcome to RenGuard !

To launch Renegade, please click 'Renegade'.

I have Renegade installed with the WOL components, I just reformatted my drive a few hours ago due to technical problems.

Any help would be greatly appreciated

Always reboot after a update / install.  
that might fix it.

I got a amd 2400+ 700+ mb with radeon 9800 PRO (ATI) with win XP

got omega drivers for my video card ([http://www.omegacorner.com/index\\_ati.htmlz](http://www.omegacorner.com/index_ati.htmlz))  
got mobo drivers updated (KT400 chipset kinda ancient)  
my dx should be newest

and it's running fine here doh

We have a new testbuild for all people that have this crashing problem 1.02. I hope it works for all cases, so we can make it official.

If you have 1.02 crashing, please visit our support chat.

My 1.01 Crashed by showing the screen for like 3 secOnds then disapearing along with the icon [the screen was just a white box]. MY 1.02 crashed by loading it, saying on the white screen and continuously loading..... I can stil run renegade but rengaurd crashes at any random time.

I put my compatability to whatever u guys told me, and it fixed the crashing but put all the text in a messed up box in the grey dialog rectangle...

Muad\_DibAlways reboot after a update / install.  
that might fix it.

Nope, didn't, RenGuard is crashing on my laptop too, which I've had since Dec.

Guess I'll be in the support chat :rolleyes:
