I have been watching all the Renguard activity, releases, etc. If you look closely, only 10% of all the servers are running it. Although players are loading up with it, for what reason? Although there are cheats, most of the servers are moderated pretty well and the ones that are not, well you get what you get.

So, at the end of the day, after all this work, what has Renguard accomplished? Take Gamespy, out of 76 servers maybe 10 have it. WOL I couldn't even find one that was running it. Seems like the cheaters are still laughing creating all this work that resulted in altering some peoples computers, when it is really not stopping them.

Don't get me wrong I appreciate the efforts, just seems like we not gaining any ground here.
