As you can see, only folders are appearing.

I don't "think" I have done anything to make this happen, its just deleted them all or something all by itself .

I thought, okay, so leveledit has fucked up on me, so I will unistall (backing up folders ofcourse) renegadepublictools and then reinstall them. And still nothing!

Any help would be MUCH appreciated!

Thanks

Andy

This can be caused by a currupt mod folder or Renegade is not installed, if it is installed i would suggest you reinstall.

Hope this helps you.

any way to tell it WHERE the renegade directory is?

As I cannot be arsed re-installing Renegade again :oops:

Then why bother asking for help, either do it or don't be helped.

you could watch into your presets folder of your mod folder if there still are the conv10.cdb and the objects.ddb file. if they still are there you could rename them and copy new ones into. this two files handle your presets tree (that's why they are in the folder called presets)

search your registry for the keys, then export, and re import

Well if its just renegade you are reinstalling why not just copy your data folder and reinstall then paste it back in

* Is confused about this conversation* :huh:

If you already have the Renegade files installed (namely always.dat), a reinstall will go super quick.

true, but won't the version of the always.dat affect the CD installer?

Version mismatch or something
