Everybody who joins the server get kicked immediately with the message "Player has no RenGuard installed."

I have no problems to join other RenGuard protected servers, but the server of mine sucks! why?

look @ this pic:

I WAS DEFINITELY UNNING RENGUARD JOINING THE SERVER!

We tried RenGuard standalone before installed brenbot, but we had the same problems!

MAC... any idea?

Greez

Try !rglocate <name> before joining. It has to list you there, before you can actually join the server.

If it's your own server, you can't join it on a LAN unless you put yourself in ssc_ignore.txt
