I am trying to set up another server, but seem to be having a problem with it. It is for Wol, and when I get it all installed and try to run it, it won't log in.

It is on a partitioned drive, and for some messed up reason will only install on the D drive. I thought I read something about the D drive being a problem (you have to do something else) but I am not sure.

Please help me. Thanks.

What firewall ports do I need to open to play on WOL? Why can't I connect to WOL?

Question

What firewall ports do I need to open to play on WOL? Why can't I connect to WOL?

Answer

What firewall ports do I need to open to play on WOL? Why can't I connect to WOL?

Be sure you have a stable internet connection. Also, if you have a Firewall or Router please open the standard WOL ports. You will need to enable some ports to UDP traffic in order to communicate with Westwood Online. Ports 1234, 1235, 1236, and 1237 should allow UDP traffic. Also, ports 7000, 3840, 4005, 4808, and 4810 will need to be opened for all TCP traffic. If you do not know how to configure your firewall, please consult your firewall documentation, contact your system administrator, or contact your Internet service provider.
