Following error message appeares when I try to start Renegade with RenGuard 1.03 instaled:

module <nieznany> przy 0000:835f101e.
Rejestry:
EAX=836f2258 CS=017f EIP=835f101e EFLGS=00010a17
EBX=00000000 SS=0187 ESP=00b8fae4 EBP=009637e0
ECX=835f102c DS=0187 ESI=00963704 FS=59c7
EDX=21142250 ES=0187 EDI=00000000 GS=0000
Bajtów w CS:EIP:
00 a0 2c 10 5f 83 18 29 6f 83 00 02 00 00 01 00
Stos:
21111c78 836f2258 0096376c 00963704 21111ea8 009639d8 00963704 00b8fb50 00000000
8192cc2c 00b8fb9c 00000000 21110ef5 00000202 00000187 00000187

In english it would be somthing like that:
"GAME caused an error: incorrect page in module at 0000:835f101e."

Other info:
 - OS: Windows 98 SE
 - Gfx card and drivers : GF2MX400 with Nvidia v. 56.64
 - RenGuard: v 1.03
 - No firewall nor antivirus software active
 - No other application started.

P.S.
Sorry for typos (if any). I do not have a dictionary at home... :oops:

It works! ! !
Finally RenGuard is up and running on my machine. I do not know what was wrong and why it did
not run in the past, so I tell you what has changed in my PC:
 - GF2MX 400 is now replaced with Radeon 9600 Pro
 - .NET Framework 1.1 is now installed
I strongly believe it was lack of .NET installed. Am I right? Does RG require .NET?

It might, I'm not sure. I know Blaze Regulator did.

Yes, RenGuard requires the .NET Framework.

Then there you go.

I didn't think it required .NET framework... coding RenGuard in .NET would have been retarded.

RenGuard does not even use MFC.

.NET is definitally not required.

Ok, then there is one more thing: when started for the first time RenGuard ask me do I want to turn on automatic updates from BHS. I usually answered Yes, but for some reason I answered No this time and it works.

Moreover I installed CP1 after I manage to run RG and guess what - game.exe error appear again. So I uninstalled RG, then installed it again and... it works!

Welcome back!

I come back to Renegade after a brake. And I still have a problem with RG.   It looks like it is still the same error message ("GAME caused an error: incorrect page in module..."), but it is now... hmm... more predictable. Here is when it happen:

step 1. Install RG
step 2. Run RG
step 3. Run Renegade
step 4. Play Renegade
step 5. Quit Renegade
step 6. Quit RG
step 7. Run RG --> ERROR ! ! !

What I have discovered is that RG works just once. I mean I have to reinstall RG to be able to run it again. So what I do is:

step 1. Install RG
step 2. Run RG
step 3. Run Renegade
step 4. Play Renegade
step 5. Quit Renegade
step 6. Quit RG
step 7. Uninstall RG
step 8. Remove game.exe and rename game2.exe to game.exe
step 9. Go to step 1.

I know it may sound wired but it works for me.

I do not expect you to solve this – I wrote this just to make you aware of the problem. If you solve it – grate! If not - well... maybe someone could create a script or something that would do:
1. Uninstall RG
2. Remove and rename game.exe/game2.exe
3. Run RG installation
Not that it is very important but it would save me a few clicks!

well maybe you could do a search on this forum like I did for "unauthorised game2.exe" and find the fix.
