Subject: LevelEdit crashes when I load a w3d..

Can someone help me out? I've been following this basic map tutorial at http://renhelp.co.uk/?tut=23, I go to terrain, click add, type some name, add the w3d in m_Modelname, click ok, and level edit freezes.

I don't know where I've gone wrong, but I read somewhere that objects on the terrain should be set to editable_patch and not mesh? Also, is w3d the right save format? I'm guessing it is crashing because w3d's don't get loaded there. I think the author of the tutorial may have made a mistake but kudos it has been an easy one to follow so far.

Give it some time. It might take a seconds or two , It does for me. Make sure you export it as a w3d file and as renegade terrain.
